Arcada FTS

Do you want

- Shade over a glass roof?
- Large areas of shade over a patio
- Rugged construction?
- Electric operation with optional remote or automatic control?

Then you need the **Arcada FTS**

The harsh environment over a glass roof is very demanding. The **Arcada FTS** has been designed for maximum durability. All visible aluminium parts are powdercoated and all steel parts are stainless steel.

The **Arcada FTS** can operate at any angle – even vertically upwards.

If the side guides are supported on posts the **Arcada FTS** can be used to cover a patio to create a weatherproof area as it will withstand a significant amount of wind and, depending on the slope, quite a lot of rain. The side guides can also be curved to cover the vertical face in addition to the sloping top.

The **Arcada FTS** is only available with electric operation.

Maximum width is 5500mm and maximum total projection is 6500mm
